EDGE CUTTING WITH NEEDLE FEED SYSTEM

Needle Feed System

Compared to normal drop feed with only the movement of the feed dog, this system allows you to drag light / medium fabrics such as sheets and curtains thanks to the needle bar that moves together with the material.

Edge Cutter

Turn on or off the edge cutter by turning the lever: this allows you to cut while sewing in the same operation. In addition, the ends of the garment will always have the same distance as the seam.

Touch Screen

The touch screen panel controls 2 stepper motors devices that allow you to control all the functions as well as the length of the stitch and the height of the presser foot.

There is also an electronically controlled knee.

Specs

Model	1952
Stitch Lenght	5mm
Footlifter Height	6-10
Max Speed	4500rpm
Volume	620x290x555
Weight	46/40Kg
